Evaluation of geochemical data of spring water from Peloponnes,
Greece » 49
- M. BRONDI - M. D. FIDELIBUS - R. GRAGNANI - L. TULIPANO
Hydrogeochemical study and distribution of some trace elements
in the most important coastal springs and groundwaters of the
Apulian Region (Southern Italy) » 65
- R. CANZIANI - V. DEL GAUDIO - U. MASCIA - G. RUINA
A proposal for a geophysical detection method of the ground-
water surface variations caused by sea water intrusion: first
experimental results » 81
- V. COTECCHIA - E. PIRASTRU
A contribution to the study of sea-water intrusion into coastal
aquifers: a nuclear method for measuring groundwater chlorine
content » 89

M. DAURÒ - E. PIRASTRU

On the method of «in situ» measurement of groundwater chlorine content: an improvement for its utilization in small diameter wells (under 30 cm) page 97

K. FIELITZ - W. GIESEL

Evaluation of groundwater salinity from well logs and conclusions on flow of highly saline water. » 107

T. TADOLINI - R. TINELLI - L. TULIPANO

Discharge conditions and variations of the main hydrological parameters of some coastal Apulian springs relating to sea water influence on groundwater 117

G. CALÒ - M. SPIZZICO - R. TINELLI - F. ZEZZA

Hydrogeological investigations on the area surrounding Santa Cesarea Terme springs (Southern Apulia) » 129

J. H. PETERS

The movement of fresh water injected in aquifers. » 145

A. AURELI

Problems arising from surexploitation of coastal aquifers in Sicily. » 157

R. A. SCHUURMANS

Restoring a briny catchment area » 169

M. BENEDINI - B. SIRANGELO - S. TROISI - M. VURRO

Mathematical model of a coastal aquifer subject to seawater intrusion: the Nardò aquifer (Italy) as an example » 183

U. BULGARELLI - V. CASULLI - D. GREENSPAN

A finite difference model for the computer simulation of salt water intrusion in coastal aquifers » 197

L. LEBBE

Mathematical model of the evolution of the fresh water lens
under the dunes and beach with semi-diurnal tides page 211

G. A. BRUGGEMAN

Use of pressure generators in solving three dimensional salt-fresh
ground-water problems » 227

K. TRIPPLER

Experiments with a model of a brackish karst spring » 239

V. COTECCHIA - A. FEDERICO

On an approximate evaluation of the mass flow rate of sub-
marine springs » 253

L. C. GOLDENBERG

Permeability decrease in coastal aquifers due to water-rock
interaction » 257

W. GEIRNAERT - S. J. DE JONG - D. SPRONG

Salinization of a well field caused by a short-circuit between
two aquifers » 267

J. BIZE

Wateringues aquifer - A particularity in salt water intrusion:
low sloped coast with high variations of tide levels » 279

L. LEBBE - W. DE BREUCK - I. BOLLE

Salt water encroachment in the western Belgian coastal plain » 285

E. BATISTA - A. BAYO - E. CUSTODIO - J. DOMÉNECH

Some aspects of sea water intrusion in Catalonia (Spain). . . » 299

G. BARBIERI - G. BARROCU - C. POLEDRINI - G. URAS

Salt intrusion phenomena in the South East coast of Sardinia. . » 315

B. KOZERSKI

Problems of the salt water origin in the vistula delta aquifers page 325

M. GIARDI - G. PRANZINI - L. SERRETTI

Salt water intrusion in the coastal plains of Versilia and Elba
Island (Tuscany) » 335

V. LIGUORI - G. CUSIMANO

Aspects of groundwater and seawater intrusion phenomena in
the Piana dei Colli (Palermo - Italy): the influence of geolo-
gical and structural features » 353

V. COTECCHIA - T. TADOLINI - L. TULIPANO

Sea water intrusion in the planning of groundwater resources
protection and utilization in the Apulia Region (Southern
Italy). » 367

APPENDIX

A synthesis of:

Salt water intrusion meeting 1968-1981

A review by William De Breuck » 383
